

AUTONOMOUS FINANCIAL LAYER

Your money. Your rules. **AI executes.**

The AI financial operator for African freelancers and global micro-businesses receiving international income.

Global Income (USD / EUR)

FLOWPAY AI INTENT
Natural Language Allocation

EXECUTION
BMONI Smart Wallet Rails

Getting paid globally shouldn't mean managing money manually.

African freelancers and micro-businesses face severe friction every time cross-border income arrives.

Currency Fragmentation

Income lands in USD, EUR, or GBP, while living and operational expenses are in NGN, KES, or MXN. Users juggle 4–6 disconnected apps just to move funds.

Disjointed Wallets

Manual Allocation Anxiety

Every payment requires mental math: "How much to save? How much for tax? How much to convert for groceries?" Users calculate and split manually every single invoice.

Constant Decision Fatigue

Predatory Fees & Hidden Spreads

Traditional SWIFT wires charge \$40–\$60 per wire plus 4–7% in hidden FX markups. Remote teams lose hundreds of dollars every payroll cycle to intermediary banks.

Up to 8% Lost in Transit

Tools Move Money, Not Intent

Existing wallets are passive databases. They execute transactions when clicked, but have zero comprehension of the user's underlying financial intent, rules, or goals.

Passive Infrastructure

People don't need another wallet. They need a **financial operator**.

An autonomous system that acts on intent with deterministic safety.

Meet FlowPay.

FlowPay turns natural-language financial instructions into structured, reviewable, and executable financial actions.

Tell your money what to do.

Natural language conversational automation that turns high-level intent into deterministic financial allocations.

**USER NATURAL LANGUAGE DIRECTIVE**

"Whenever I receive money, keep 30% in USD, convert 50% to Naira for expenses, and reserve 20% for tax."

PAYMENT TRIGGER EVENT

\$2,000.00 USD Received

Validated 100% Split

**USD Reserve (30%)**
Self-Custody USDB Smart Wallet

\$600.00

**NGN Living Expenses (50%)**
Converted to CNGN @ 1,550 NGN/USD

₦1,550,000.00

**Tax Vault Reserve (20%)**
Protected Sub-Wallet Buffer

\$400.00

**No money moves without explicit user approval. All transfers require on-device B-Key hardware PIN authorization.**

Money Missions

**Your money. Your rules. AI executes.**

Set autonomous financial directives. FlowPay monitors your multi-currency cashflow and executes deterministic BMONI operations when conditions are met.

Active Autonomous Missions

2 Active

20% Emergency Fund Auto-Sweep

☒

Auto-sweeps 20% of incoming international USD to high-yield NGN savings.

 \$1,420 swept this month

Contractor Card Monthly Cap

☒

Enforce a strict \$500/month spending ceiling on contractor virtual cards.

 Protected \$2,100 from overdrafts

FX Rate Alert & Dip Conversion

☐

Auto-convert USD to MXN when exchange rate hits favorable threshold (>18.0).

 Standing order active

FlowPay Money Missions

Real-Time Deterministic Allocation Engine

AI proposes. Users stay in control.

Judges evaluate responsible AI. Here is our non-negotiable security pipeline: AI is advisory; execution is human-authorized and hardware-signed.

✗

AI does NOT hold private keys

Keys are generated and stored exclusively in Android Keystore / iOS Secure Enclave via BMONI Embedded SDK.

✗

AI does NOT sign transactions

Only the user's on-device PIN can unlock the secp256k1 signing key to produce authentic signatures.

✗

AI does NOT independently move money

Zero automatic movement. Every proposed transaction expires unless explicitly signed by the owner.

✓

Deterministic validation outside the model

Dual-sided TypeScript and Dart validators ensure allocation percentages strictly equal 100% and currencies are allowed.

✓

Explicit human preview & fee disclosure

Every operation shows exact source, conversion, destination, FX rates, and minor-unit fees before authorization.

✓

Hardware enclave signing boundary

Complies strictly with EIP-191 personal signing and raw 32-byte hash secp256k1 BMONI proposal verification.

Built on BMONI's financial infrastructure.

Deep, authentic integration across BMONI's official Flutter packages, REST APIs, and cryptographic primitives.

Flutter Mobile App Architecture

Integrates official BMONI packages: `bmoni_embedded_sdk: ^0.0.2`, `bkey_uikit: ^0.0.1`, and `bmoni_embedded_wallets_cards: ^0.0.1`.

EmbeddedWalletCard

PBKDF2 Salted PIN

Secure Enclave Signing

Official SDKs

Zero Client-Side Secret Leakage

Partner `x-api-key` remains strictly server-side in FlowPay's Node.js backend. Private keys never leave the phone. The backend proxies proposals; mobile signs on-device.

Security Isolation

26 Verified BMONI Platform Endpoints

Live Verified

- **Smart Wallets:** Managed ERC-4337
- **KYC/KYB:** Nigeria BVN & Mexico CURP
- **Webhooks:** HMAC-SHA256 verification

- **Proposals:** 4-call sequence
- **Virtual Cards:** Mastercard on BMONI
- **Currencies:** CNGN, MEXe, USDB

What happens when the user asks for more than they have?

Balance-aware smart routing that transforms failure states into guided financial operations.

NATURAL LANGUAGE COMMAND

"Send \$500 to my designer in Ghana."

TRADITIONAL BANKING APP

✗ "Insufficient Funds"

USD smart wallet only holds \$300. Transaction immediately rejected. User forced to manually swap wallets, calculate rates, and start over.

FLOWPAY SMART OPERATOR

✓ Balance-Aware Auto-Route

FlowPay detects ₦6,820,000 NGN in user's secondary wallet. Automatically structures the exact funding path and conversion needed.

DYNAMIC MULTI-RAIL FUNDING PATH

Primary USD Balance Applied:	\$300.00 USD
Remaining Deficit Converted:	₦310,000.00 NGN (\$200.00 USD @ 1,550 NGN/USD)
Transparent Fees:	\$0.50 Network Fee • 15 bps FX
Total Payout to Designer:	\$500.00 USD

One Employer. Many Countries. One Bill.

Employers manage distributed global teams from a single dashboard. Aggregated in USD, fanned out in local currencies.

EMPLOYER SAVINGS

\$330.00

97% cost reduction

FlowPay orchestrates multi-country payroll workflows while BMONI provides the underlying wallet, onboarding, payment, and virtual card infrastructure.

Simple architecture. Strong security boundaries.

Clean three-tier separation between the AI reasoning layer, application orchestration, and BMONI financial infrastructure.

From financial tools to financial agency.

How FlowPay transforms economic mobility for the world's fastest-growing digital workforce.

Intentional Wealth Retention

Freelancers who receive lump-sum foreign payments often accidentally spend their tax liabilities or emergency reserves. FlowPay executes automatic sweeps the instant money arrives, guaranteeing intentional savings.

Leveling Cross-Border Work

African and Latin American professionals can now compete for global roles without forfeiting 5% to 8% of their gross earnings to predatory intermediary banks and exploitative exchange rates.

Micro-Business Global Scaling

Small startups in London, New York, or Lagos can now hire contractors in Nigeria and Mexico effortlessly. One aggregated bill in USD, local-currency payouts, and virtual employee cards instantly.

Authentic Self-Custodial Inclusion

Unlike custodial fintechs that freeze user accounts arbitrarily, FlowPay builds on self-custodial smart wallets. Users hold their own keys in their hardware enclave, backed by regulated BMONI infrastructure.

"The future of financial software isn't just moving money.
It's helping people make better decisions about it."

Let's see it work.

Three live demonstration flows proving real working code across the mobile app, backend, and BMONI infrastructure.

DEMO 01 — PERSONAL

Autonomous Money Mission

Natural Language Intent → Execution

Enter: "Whenever I receive money, keep 30% USD, convert 50% Naira, reserve 20% Tax". AI interprets → Deterministic validation → Review preview modal → B-Key hardware PIN sign → Execution.

DEMO 02 — BUSINESS

Global Payroll Fan-Out

One Employer. Many Countries. One Bill.

Nigeria (🇳🇬 \$2,000) + Mexico (🇲🇪 \$2,000) = \$4,000 aggregate bill. One "Run Payroll" action → 4-stage timeline progression → Local currency disbursement on BMONI rails with 97% fee savings.

DEMO 03 — SECURITY

Hardware Signing & Corporate Audit

B-Key PIN Signing & Ledger Verification

Observe on-device 6-digit PIN auth sheet. Review immutable audit activity logs in PostgreSQL with zero credential leakage and full transaction references.

BMONI FINTECH HACKATHON 2026

Your money. Your rules.
AI executes.

1. AI INTENT

Understands intent.

2. HUMAN GOVERNANCE

You stay in control.

3. BMONI RAILS

BMONI moves the money.

Thank you.
